

## EXERCISE - 1

### **Installation of VirtualBox and Creation of Virtual Machines with Different Operating System Flavors**

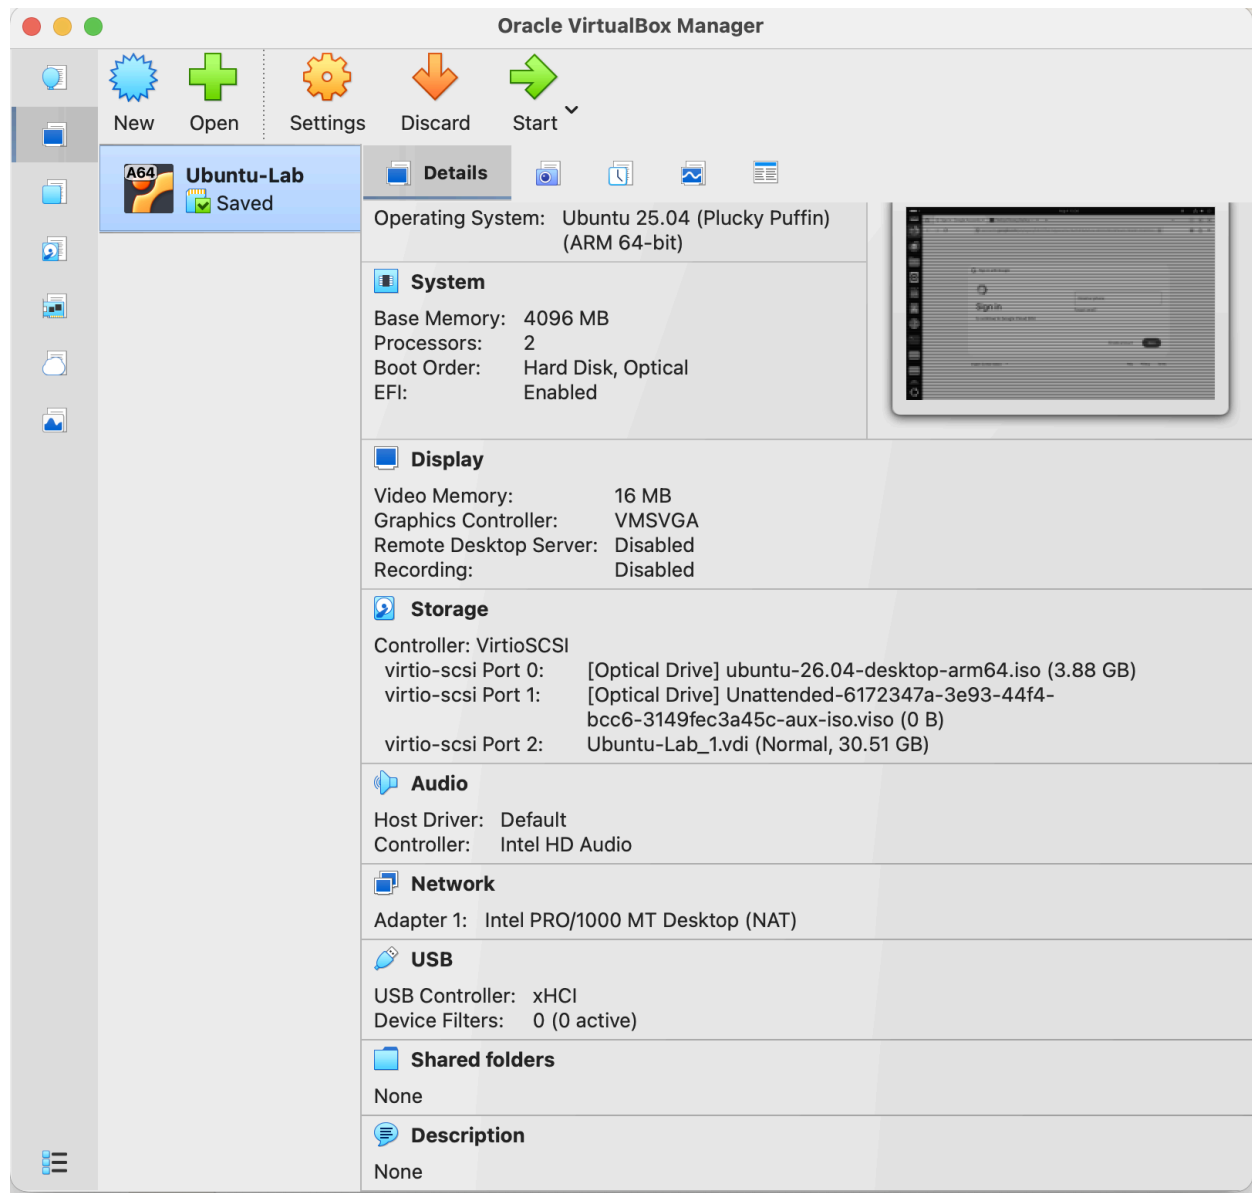

#### **Aim:**

To install Oracle VM VirtualBox and create a virtual machine with Ubuntu operating system.

#### **Algorithm:**

1. Download and install Oracle VM VirtualBox.
2. Download the Ubuntu Desktop ISO image.
3. Open VirtualBox and create a new virtual machine.
4. Set the virtual machine name as **Ubuntu-Lab** and select Linux/Ubuntu as the operating system.
5. Allocate the required memory to the virtual machine.
6. Create a virtual hard disk with the required storage capacity.
7. Attach the downloaded Ubuntu ISO image to the virtual machine.
8. Start the virtual machine and boot using the Ubuntu ISO.
9. Follow the Ubuntu installation wizard.
10. Select the keyboard layout, timezone, username, and password.
11. Complete the Ubuntu installation.
12. Restart the virtual machine.
13. Verify that the Ubuntu desktop loads successfully.

## Output:

## Result:

Thus, Oracle VM VirtualBox was successfully installed and an Ubuntu virtual machine was created and executed successfully.
